A: To answer my own question: What I did is, in the code, replace " " with " ". `$_SERVER['REQUEST_URI']`." The original path will be included in the tag Dynamic Light Scattering, in vitro assembly, and crystal structure of the B subunit of Escherichia coli adenylosuccinate synthetase. The B subunit (Mr = 58 000) of Escherichia coli adenylosuccinate synthetase is composed of two domains: the N-terminal one (Mr = 47 000) interacts with the catalytic A subunit while the C-terminal one (Mr = 11 000) contains the catalytic sites. Upon reduction, the B subunit undergoes a conformational change that reduces the molecular mass to about 22 000. The domain responsible for this conformation change was studied by dynamic light scattering, suggesting that the N-terminal domain has a native molecular mass of around 4400 kDa while the C-terminal one is around 1200 kDa. The kinetics of in vitro assembly of the two domains from native B subunit in the presence of the A subunit was followed. The C-terminal domain was found to assemble more rapidly and more efficiently than the N-terminal one, indicating that the N-terminal domain in solution is associated with the C-terminal domain, forming a secondary structure. Moreover, the assembly of the two domains in vitro was monitored by electron microscopy. The kinetics of in vitro assembly of the B subunit in the presence of the catalytic A subunit was studied by dynamic light scattering and electron microscopy. The C-terminal domain was found to assemble more rapidly and more efficiently than the N-terminal one, indicating that the N-terminal domain in solution is associated with the C-terminal domain, forming a secondary structure.Q: Karma: testing with PhantomJS and WebdriverIO I'm trying to setup karma for testing (angular.js and WebdriverIO). I was able to setup karma on my mac (Home 2d92ce491b
