
Power System Analysis By Nagoor Kani Pdf Download !!TOP!!

The above file is a searchable ebook of how to download free pdf ebooks on related topics. If you follow this advice your ebook book list will update online and you will. hTERT and p16 are of independent prognostic value in cytologically and histologically diagnosed 'in situ' carcinoma of the cervix. To assess whether human telomerase (hTERT) and/or p16 alterations could be useful prognostic markers of cervical in situ carcinoma. Thirty-eight histologically/cytologically proven cervical in situ lesions were studied. Staining intensity of hTERT and p16 was assessed in a tissue microarray. The association of hTERT and p16, and their combined use in predicting overall and disease-free survival, were assessed. hTERT expression was detected in the basal layer in 66.6% of the in situ lesions, while 64.7% showed p16 up-regulation. Neither hTERT nor p16 had a significant association with recurrence-free survival, but combined assessment of hTERT and p16 showed a significant association with progression-free survival ($P = 0.039$) and overall survival ($P = 0.049$). hTERT and p16 in cervical in situ carcinomas are of independent prognostic value. The combination of hTERT and p16 analysis might be useful to provide information on disease progression during the follow-up of patients with cervical in situ carcinoma. Conventionally, as illustrated in FIG. 9, a cam follower is mounted on a cam shaft 53 of a cam driven type internal combustion engine 50 such as a V-type engine in a state such that a cam 53a thereof is in contact with a surface (cylinder liner) of a cylinder wall 54, and rotates integrally with the cam shaft 53 due to a rotation of the cam shaft 53. The cam is formed to be inclined at an angle of rotation of the cam shaft 53 with respect to the horizontal line, and the cam follower is moved in a vertical direction (lateral direction) by the rotation of the cam. In order to realize the cam-driven type engine as described above, a cylindrical cam shaft provided with the cam is rotated. Accordingly, the cam is rotated together with the cam shaft, and the cam follower contacts with the surface of the cylinder wall to be moved up and down. When the cam follower moves up and down, the cylinder wall is abutted on the cylinder liner
